

## Lecture Note I-7 Networks and Positive Feedback

- Positive feedback
- Network Externality
- Evolution VS Revolution
- Openness VS Control

National Chiao Tung University

## Positive Feedback

- Positive feedback
  - The stronger get stronger, the weaker get weaker
  - market dominated by a single firm or technology
- Negative feedback
  - The stronger get weaker, the weaker get stronger
  - Market in oligopoly
  - Stabilizing (competitive and balanced equilibrium)
- Positive feedback market
  - Makes a market “tippy”: “Winner take all markets”
  - Examples: **VHS** v. Beta (1980), **Wintel** v. Apple (1990)
  - A more potent force in the network economy or market for information infrastructure

## Positive Feedback

© 2006 Institute of Information Management

National Chiao Tung University

## Adoption Dynamics

Adoption of new technologies: S-shape curve  
(CD, color TV, video game machine, email, Internet, etc.)

© 2006 Institute of Information Management

National Chiao Tung University

## Sources of Positive Feedback

- Supply side economies of scale
  - Declining average cost
  - Marginal cost less than average cost
  - Example: information goods
- Demand side economies of scale
  - Network effects
  - In general: fax, email, Web
  - In particular: Sony v. Beta, Wintel v. Apple

## Demand Side Economies of Scale

Implication: success and failure are driven by the consumer expectation and the underlying value of product

© 2006 Institute of Information Management

## Demand Side Economies of Scale

© 2006 Institute of Information Management

National Chiao Tung University

## Critical Mass

© 2006 Institute of Information Management

National Chiao Tung University

## Example: Fax

## Network Externalities

- Networks
  - Real networks
    - Communications, transportation
  - Virtual networks
    - Like “Mac network”
- Externality
  - Externality arise when one market participant affects others without compensation being paid
- Value of Network
  - Metcalfe’s Law:  
Value of network of size  $n$  proportional to  $n^2$

© 2006 Institute of Information Management

National Chiao Tung University

## Laws of growth

- Sarnoff’s Law - **content**
  - Radio and television networks
  - The value of broadcast networks is **proportionate** to the number of views
- Morre’s Law (microprocessor investor)-**innovation**
  - Hyper-evolution of electronics, computers, and networks
  - The number of elements that could be packed into the same amount of space on microchip **double** every year
- Metcalfe’s Law (Ethernet inventor)- **communication**
  - Growth of value in networks
  - The total value of a network where each node can reach every other node grows with the **square** of the number of the nodes
- Reed’s Law - **community**
  - Links between computer networks and social networks
  - Email, BBS
  - The value of online social networks grows proportionately to users **exponentially**

## Lock-In and Switching Costs

- Network effects lead to substantial **collective switching costs**
  - *The combined costs of all users*
  - **Nonlinear**
  - Even worse than individual lock-in
  - Due to **coordination costs**
- Example:
  - QWERTY (1870) vs AOEUIDHTNS (1932)

## Igniting Positive Feedback

- Evolution (compatibility)
  - Give up some performance to ensure compatibility, thus easing consumer adoption
- Revolution (performance)
  - Wipe the slate clean and come up with the best product possible

© 2006 Institute of Information Management

National Chiao Tung University

## Tradeoff of Compatibility and Performance

© 2006 Institute of Information Management

National Chiao Tung University

## Evolution

- Offer migration paths to new technologies
- Examples
  - Microsoft, Intel
- Build new network by links to old one
  - One way compatibility
- Problems: technical and legal

© 2006 Institute of Information Management

National Chiao Tung University

## Strategies of Evolution

- Technical obstacles
  - Use creative design
  - Think in terms of system
  - Converters and bridge technologies
- Legal obstacles
  - Need IP licensing
  - Example: Sony and Philips CDs (pay patent license fee)

© 2006 Institute of Information Management

National Chiao Tung University

## Revolution

- Performance: Groves's law: "10X rule"
- Success
  - depend on switching costs, critical mass
  - Market is growing rapidly, lock-in is mild, performance loom larger than backward compatibility
- Example: Game video
  - Lower switch cost for ten-year-boys
  - Sega vs Nintendo

© 2006 Institute of Information Management

National Chiao Tung University

## Openness v. Control

- Your reward = [Total value added to industry] x [Your share]
  - Total value added to industry
    - Depends on product *and*
    - Size of network
  - Your share
    - Depends on how open

© 2006 Institute of Information Management

National Chiao Tung University

## Tradeoff of Openness and Control

© 2006 Institute of Information Management

National Chiao Tung University

## Openness vs. Control

- Openness
  - Full openness
    - Anybody can make the product
  - Alliance
    - Only members of alliance can use
- Control
  - Control standard and go it alone
    - If several try this strategy, may lead to standards wars

© 2006 Institute of Information Management

National Chiao Tung University

## Generic Strategies

Company's market share Total industry's value

		Control	Open
Compatibility	Compatible	Controlled Migration ②	Open Migration ③
	Performance	Performance Play ①	Discontinuity ④

© 2006 Institute of Information Management

National Chiao Tung University

## Generic Strategies (cont')

- (1) Performance Play
  - Introduce new, incompatible technology
  - Examples: Palm Pilot, Iomega Zip
- (2) Controlled Migration
  - Compatible, but proprietary
  - Examples: Windows 98, Pentium
- (3) Open Migration
  - Many vendors, compatible technology
  - Examples: Fax machines, some modems
- (4) Discontinuity
  - Many vendors, new technology
  - Examples: CD audio, 3 1/2" disks

© 2006 Institute of Information Management

National Chiao Tung University

## Historical Examples of Positive Feedback

- Railroad Gauges....
- Battle of the Systems: AC v. DC....
- Telephone networks and Interconnection....
- Color Television....
- High-Definition Television (HDTV)....

National Chiao Tung University

## Summary

- Positive feedback means strong get stronger and weak get weaker
- Consumers value size of network
- Adoption dynamics follows an S-shape growth path
- Positive feedback works for large networks, against small ones
- Consumer expectations are critical
- Fundamental tradeoffs: (performance and compatibility), (openness and control)
- Generic strategies
  - Performance play, Controlled Migration, Open Migration, Discontinuity
